CLOUD ENGINEER

Ubuntu | RHEL | AWS | Ansible | Terraform | Storage & Backup | Monitoring

PROFESSIONAL SUMMARY:

Cloud and DevOps engineer with hands-on experience across AWS, Azure, Linux administration, and infrastructure-as-code. MS in Computer Science. Built production-style projects using Terraform, Docker, Kubernetes, Ansible, and GitLab CI. Seeking a Cloud Support Engineer / Junior DevOps role to apply my automation and troubleshooting skills.

TECHNICAL SKILLS

Operating Systems: Red Hat Enterprise Linux (7/8/9), CentOS, Ubuntu (12.04 – 22.04), Windows Server

Linux Administration: User & group administration, sudoers/PAM, SELinux, firewall/iptables, systemd services, cron, package management (APT/YUM/DNF), kickstart provisioning, kernel parameter tuning (sysctl), ulimit, troubleshooting

Storage & Filesystems: LVM, XFS, ext4, NFS, multipath, RAID, EBS volume management, NAS-mounted shares

Backup & Disaster Recovery: AWS Backup, EBS Snapshots, RDS automated snapshots, rsync, scheduled backup policies, DR readiness for 99.9% uptime SLAs

Cloud (AWS): EC2, S3, RDS, CloudWatch, IAM, VPC, Lambda, CloudFront, ECS, Auto Scaling, Secrets Manager, SSM Parameter Store

Cloud (Azure): Virtual Machines, Networking, Storage, Backup

Infrastructure as Code: Ansible (playbooks, roles, inventory), Terraform (reusable modules), AWS CloudFormation

Monitoring & Logging: AWS CloudWatch (metrics, log groups, alarms), Nagios, Zabbix, Prometheus, Grafana, ELK Stack, Datadog, Splunk

Scripting & Automation: Bash/Shell, Python, Perl, YAML, JSON, PowerShell(basics)

Security: SSH key/certificate hardening, SSL/TLS, SELinux, AWS IAM (least-privilege), RBAC, KMS, HashiCorp Vault, LDAP, fail2ban, audit logging

Networking: DNS, DHCP, TCP/IP, SSH, SSL/TLS, Load Balancing, HTTP(S), VPN, Security Groups, NACLs

Containerization: Docker, Kubernetes, Helm

Version Control: Git, GitHub, GitLab

ITSM Tools: ServiceNow, Freshservice, JIRA

CERTIFICATIONS

AWS Certified Cloud Practitioner

AWS Certified Solutions Architect – Associate

PROFESSIONAL EXPERIENCE

Cognizant Technology Solutions India Pvt Ltd.
Cloud DevOps Engineer

September 2021 – July 2022
Hyderabad, India

- Architected and deployed a multi-AZ VPC with public/private subnets, NAT gateway, and security groups on AWS, supporting a 3-tier web application with high availability.
- Configured IAM roles and policies following least-privilege principles for 12+ AWS services; reduced excess permissions by 70% via policy refactoring.
- Implemented S3 lifecycle policies and Intelligent-Tiering, reducing storage costs by ~40% on a 2TB dataset.
- Set up CloudWatch alarms, dashboards, and SNS notifications for EC2, RDS, and ALB health metrics, reducing mean-time-to-detect from 30+ min to under 2 min.
- Built reusable Terraform modules (network, compute, RDS) used across 3 environments (dev/stage/prod), reducing duplicate code by 80%.
- Configured remote state backend on S3 with DynamoDB state locking, enabling safe multi-developer collaboration.
- Migrated 50+ manually provisioned resources to Terraform using ``terraform import``, achieving full IaC coverage.
- Containerized a Python/Flask app with a multi-stage Dockerfile, reducing image size from 450MB to 180MB (60% reduction) and build time by 35%.
- Authored docker-compose.yml orchestrating Flask, PostgreSQL, Redis, and Nginx services with custom networks and named volumes.
- Deployed a microservices application to AWS EKS using Helm charts, with HPA (Horizontal Pod Autoscaler) responding to CPU thresholds.
- Configured liveness and readiness probes, resource requests/limits, and a PodDisruptionBudget to ensure self-healing and zero-downtime rolling updates.
- Implemented RBAC roles and namespaces to isolate workloads; integrated cluster-autoscaler to scale nodes based on pending pods.
- Designed a GitLab CI pipeline with build, test, security-scan (Trivy), and deploy stages; reduced release time from manual ~1 hour to automated ~10 min.
- Integrated SonarQube and dependency-vulnerability scanning into GitHub Actions; blocked 12+ vulnerable PRs from merging into main.
- Wrote Bash scripts to automate log rotation, backup, and health-check tasks across 20+ Linux servers; eliminated 5 hours/week of manual work.
- Diagnosed and resolved a recurring memory leak by analyzing `/proc`, `top`, and `journalctl` outputs; root-caused to a stale daemon and patched via `systemd` unit.
- Hardened Ubuntu/RHEL servers per CIS Benchmark Level 1 using Ansible (UFW/firewalld, fail2ban, SSH key auth, audit logging).
- Authored idempotent Ansible playbooks to bootstrap a 10-server fleet (Nginx, Docker, monitoring agents) in under 8 minutes vs. ~3 hours manual.
- Troubleshooted intermittent latency between EC2 instances using VPC Flow Logs, `traceroute`, and `tcpdump`, identified misrouted ACL rule and resolved.
- Configured Application Load Balancer with path-based routing and SSL termination for 3 microservices behind a single domain.
- Built a Prometheus + Grafana monitoring stack with custom dashboards for application latency, error rate, and infrastructure metrics.
- Configured Alert manager routes for PagerDuty escalation; tuned alert thresholds to reduce false positives by 80%.

- Documented runbooks for 8 recurring incidents in Confluence; reduced average resolution time for repeat issues by 50%.
- Mentored 2 junior teammates on Git workflows, Docker fundamentals, and AWS basics through paired programming sessions.
- Provided 24/7 on-call rotation support for production systems, including off-hours patching windows and incident response.

Linux & AWS Infrastructure Engineer (Projects & Lab)
Independent / Academic

August 2022 – Present
Houston, TX

- Designed and maintained multi-distribution Linux environments (Ubuntu, RHEL, CentOS) on AWS EC2 using standardized AMIs and automated provisioning.
- Built automated server bootstrap workflows using Ansible roles for package installation, Docker setup, monitoring agents, and patch management.
- Implemented enterprise-style storage architecture using LVM, NFS mounts, and tiered EBS volumes for applications, logs, and backups.
- Designed backup and disaster recovery strategy using AWS Backup, EBS snapshots, and rsync offsite replication, validated through scheduled recovery testing.
- Implemented host security controls including SELinux enforcement, SSH key-only authentication, firewalld rules, fail2ban, and auditd logging.
- Developed Python and Bash automation for user lifecycle management, certificate renewal, compliance reporting, and log archival.
- Tuned Linux performance using kernel parameter optimization, ulimit configuration, and storage I/O tuning for application workloads.
- Administered AWS services (EC2, S3, RDS, IAM, CloudWatch) following least-privilege access and tag-based governance models.
- Supported containerized workloads using Docker and Kubernetes where required by application deployments.
- Created operational documentation and standard operating procedures for patching, monitoring, and incident recovery workflows.

EDUCATION

Campbellsville University
Master of Science in Computer Science | CGPA: 4.0/4.0

August 2022 – August 2024
Louisville, Kentucky, USA

Osmania University
B.E. in Electronics and Communication Engineering | CGPA: 8/10

August 2016 – September 2020
Hyderabad, India

LANGUAGES

English (Full Professional)
Spanish (Limited Working)
